<i>Foreword</i>	<i>page</i> v
<i>Preface</i>	vii
<i>Notation</i>	xi
<b>5 Trees and the Composition of Generating Functions</b>	<b>1</b>
5.1 The Exponential Formula	1
5.2 Applications of the Exponential Formula	10
5.3 Enumeration of Trees	22
5.4 The Lagrange Inversion Formula	36
5.5 Exponential Structures	44
5.6 Oriented Trees and the Matrix–Tree Theorem	54
Notes	65
References	69
Exercises	72
Solutions to Exercises	103
<b>6 Algebraic, <math>D</math>-Finite, and Noncommutative Generating Functions</b>	<b>159</b>
6.1 Algebraic Generating Functions	159
6.2 Examples of Algebraic Series	168
6.3 Diagonals	179
6.4 $D$ -Finite Generating Functions	187
6.5 Noncommutative Generating Functions	195
6.6 Algebraic Formal Series	202
6.7 Noncommutative Diagonals	209
Notes	211
References	214
Exercises	217
Solutions to Exercises	249
<b>7 Symmetric Functions</b>	<b>286</b>
7.1 Symmetric Functions in General	286
7.2 Partitions and Their Orderings	287

7.3	Monomial Symmetric Functions	289
7.4	Elementary Symmetric Functions	290
7.5	Complete Homogeneous Symmetric Functions	294
7.6	An Involution	296
7.7	Power Sum Symmetric Functions	297
7.8	Specializations	301
7.9	A Scalar Product	306
7.10	The Combinatorial Definition of Schur Functions	308
7.11	The RSK Algorithm	316
7.12	Some Consequences of the RSK Algorithm	322
7.13	Symmetry of the RSK Algorithm	324
7.14	The Dual RSK Algorithm	331
7.15	The Classical Definition of Schur Functions	334
7.16	The Jacobi–Trudi Identity	342
7.17	The Murnaghan–Nakayama Rule	345
7.18	The Characters of the Symmetric Group	349
7.19	Quasisymmetric Functions	356
7.20	Plane Partitions and the RSK Algorithm	365
7.21	Plane Partitions with Bounded Part Size	371
7.22	Reverse Plane Partitions and the Hillman–Grassl Correspondence	378
7.23	Applications to Permutation Enumeration	382
7.24	Enumeration under Group Action	390
	Notes	396
	References	405
<b>A 1</b>	<b>Knuth Equivalence, Jeu de Taquin, and the Littlewood–Richardson Rule</b>	413
A1.1	Knuth Equivalence and Greene’s Theorem	413
A1.2	Jeu de Taquin	419
A1.3	The Littlewood–Richardson Rule	429
	Notes	437
	References	438
<b>A 2</b>	<b>The Characters of <math>GL(n, \mathbb{C})</math></b>	440
	Exercises	450
	Solutions to Exercises	490
	<i>Index</i>	561
	<i>Additional Errata and Addenda</i>	583
